

## **Studio Tutorial**

Each person should prepare a 10 minute tutorial (or thereabouts) related to something they have learned in Studio. These will be open for discussion in SE591.

Pick any pertinent topic. It might be related to a framework, a protocol, a process – anything at all which relates to something you have learned as part of your Studio project. Tutorials conveying something concrete are encouraged.

Prepare and record a presentation. I suggest (as one option) downloading a trial version of Camtasia. <https://www.techsmith.com/camtasia.html?gclid=CKqH19iWo8sCFQiUaQod83kJBQ> You can release your tutorial with a private link to YouTube.

Post the link to your tutorial in D2L – under the Discussion – Video Tutorial.

That's it! There are few constraints apart from “share something that you've learned with us”.

Recordings don't need to be perfectly produced – but they should be informative.
